Rain Harvesting
Complete Rainwater Solutions

# Leaf Beater®

## The compact high performance rain head

The Leaf Beater® works like the Leaf Eater® and is more compact making it ideal for use with under eaves tanks. It features an integrated flow directional gutter outlet which directs the flow of water from the gutters onto an **adjustable elliptical primary screen** of 6mm aperture. This screen is virtually vertical enabling the action of the water to wash the screen and minimise maintenance.

A secondary stainless steel screen is also included to keep mosquitoes and vermin out of downpipes in a "wet" system. With the removal of the secondary screen, the Leaf Beater® is ideal for use purely as a debris removing device even when rainwater is not being collected.

## How it works

An ingenious feature has been incorporated into the operation of the primary screen. Four settings can be applied to vary the angle at which the elliptical primary screen faces to adjust for various intensities of rainfall and amounts of debris. After observing the performance of the Leaf Beater®, the screen can be adjusted until the best operating setting is achieved.

**The angle of the primary screen on the Leaf Beater® can be adjusted depending on the intensity of rainfall and the amount of debris in the area**

## How it is installed

The Leaf Beater® is usually mounted directly under the roof gutter, however can be mid-mounted on a wall to make it easier to access for cleaning.

The Leaf Beater® range includes four variants and connects with PVC and metal downpipes:
1. For **round** downpipes – **80/90mm dual fit** and **100mm** sizes,
2. For **rectangular** downpipes – **100mm x 50mm** and **100mm x 75mm** sizes
